

# Permageddon - 17/05/2019TUTC+2

Early in the morning, things were weird for the EU:

[https://cdn.discordapp.com/attachments/246568944213819393/616726109089955860/nsfw-rant\\_-](https://cdn.discordapp.com/attachments/246568944213819393/616726109089955860/nsfw-rant_-)

Which.... well, you probably already know the story, but here was the result:

**oλpυιm** 05/17/2019  
well, wasn't expeting to tag everyone so soon again (edited)

@everyone  
CRITICAL SALESFORCE ISSUE

>> It has been confirmed on mutiple orgs, spanning multiple shards (eu6, eu8, NA41, NA49 at least) that Salesforce has bugged out this morning and has given MODIFY ALL (so all permisisions) to literally EVERY SINGLE PROFILE in some orgs. This includes Standard profiles and Custom as well. Yes, EVEN STANDARD PROFILES

Please log in to ANY org you mnage and check if they are affected. If they are:

- log a case with Salesforce about this ASAP
- check if you have a recently refreshed sandbox. If so, check if profile permissions are correctly set there - sandboxes seem to be unaffected.
- Contact the customer, explain that there is a Salesforce issue that is on the Salesforce side. If they are NOT using standard profiles and you have a sandbox backup, you acn use this to (manually) reset profiles to the correct state. If there isn't or this is undoable for any reason, the customer can either wait it out, or Freeze ALL USERS to prevent data that shouldn't be shared from being shared.

This is not a friday joke. CHECK ALL ORGS.

EDIT:  
Salesforce have confirmed it's a multi-org issue and they're working on a solution right now  
^ from premier support  
it's confirmed boys  
watch it burn

To check if you're affected you can run this SOQL and see if profiles that should not have this permission have it:

```
SELECT Parent.Profile.Name,PermissionsModifyAllRecords FROM ObjectPermissions  
WHERE Parent.IsOwnedByProfile = true AND SObjectType = 'Account' and PermissionsModifyAllRecords = true
```

Second bug wave, no visibility:

```
SELECT Parent.Profile.Name,PermissionsModifyAllRecords, SObjectType FROM ObjectPermissions  
WHERE Parent.IsOwnedByProfile = true AND SObjectType = 'Account' and PermissionsRead = False (edited)
```

... And its impact on our dear Discord server:

<https://cdn.discordapp.com/attachments/588002488322621460/588009621944270869/unknown.pn>
